

The image displays a sequence of Feynman diagrams representing a mathematical identity. On the left, four diagrams are summed, separated by plus signs. Each diagram features a central vertical red line. The first diagram shows two fermion loops (solid lines) on either side of the red line, with external momenta p_1 and p_2 and internal loop momenta k . The second and third diagrams show more complex internal fermion line connections. The fourth diagram shows the fermion lines crossing the red line. The right-hand side of the equation is the product of two disc diagrams, $\text{disc}_{p_1^2}$ and $\text{disc}_{p_2^2}$, which are represented as diamond-shaped fermion loops with wavy external lines.

$$\text{[Sum of 4 diagrams]} = \text{disc}_{p_1^2} \text{disc}_{p_2^2}$$
