

The image displays a sequence of Feynman diagrams representing a mathematical identity. It begins with a sum of four diagrams, each featuring two vertical blue lines and a central red vertical line. The first diagram shows two fermion loops (solid lines) on either side of the red line, with a wavy line connecting them. The second diagram shows a fermion loop on the left and a gluon loop (wavy line) on the right. The third diagram shows a gluon loop on the left and a fermion loop on the right. The fourth diagram shows two gluon loops. Each diagram is labeled with momenta: p_1 , p_2 , k , $k-p_1$, and $k-p_2$. The diagrams are separated by plus signs.

This sum is followed by an equals sign and the expression $\text{disc}_{p_1^2} \text{disc}_{p_2^2}$. To the right of this expression is a final diagram: a large circle with a red dot at its center. A wavy line connects the red dot to the top of the circle, and a solid line connects it to the bottom. The top of the circle is labeled p_1 and the bottom is labeled p_2 .
