

The diagram on the left shows a quark line (solid line with arrows) passing through a vertical red line. The quark line is split into two parts. The left part is a triangle loop with a gluon (wavy line) and a quark (solid line). The right part is a triangle loop with a gluon (wavy line) and a quark (solid line). The external momenta are labeled $p_1 - k$ and $p_2 - k$. The internal momenta are labeled k . The diagram is split by a vertical red line.

$$= \text{disc}_{p_1^2} \text{disc}_{p_2^2} \left(\left(\begin{array}{c} p_1 \downarrow \\ \text{[Diagram of a quark loop with a gluon and a quark]} \\ p_2 \uparrow \end{array} \right) \Bigg|_{\text{soft}} \right) + \mathcal{O} \left(\frac{\Lambda^2}{q_h^2} \right)$$

The diagram on the right shows a quark loop with a gluon and a quark. The external momenta are labeled p_1 and p_2 . The internal momenta are labeled k . The diagram is enclosed in a large circle, and the word "soft" is written below it.
