

The image displays a series of Feynman diagrams and an integral expression. On the left, there are two diagrams separated by a plus sign. Each diagram features a vertical dashed red line. The first diagram shows two incoming particles with momenta p_1 and p_2 from the left, and two outgoing particles with momenta p_1 and p_2 to the right. Internal lines are labeled with k . The second diagram is similar but with different internal line connections. To the right of these is another set of two diagrams, also separated by a plus sign. These diagrams show more complex internal line structures with various labels like $k - p_1$ and $k - p_2$. The final part of the image is an integral expression:

$$= \text{disc}_{p_1^2} \text{disc}_{p_2^2} \int \frac{d^d k}{(2\pi)^d} \frac{N_{\boxtimes}^{q\bar{q}} \delta_{q^2}^+(p_{12} - k) \delta_0^+(k)}{p_1^2 p_2^2 (k - p_2)^2 (k - p_1)^2}$$
